

**DFW  
LABOR MARKET  
UPDATE  
MAY 2022**

Published July 13, 2022

## Summary

DFW recorded a **net gain** of **34,300 jobs** in May, yielding a total workforce of **4,097,400**. Despite this growth the unemployment rates have begun to slightly **increase** for all three geographies. The largest growth occurred in the **leisure and hospitality** which added **16,300 jobs** from April. The only two industries to experience a decrease in employment from the same time period went to **government** and **education and health services**.

While **software developers** are usually found at the top of the job postings list, this month marks a particularly high level of growth for this occupation with over **7,200** extra postings from the previous month for an increase of **108.4%**. Part of this growth can be attributed to a handful of companies like **CyberCoders**, which has just recently opened a new office in DFW and accounts for roughly **1,600** of these unique postings in May.

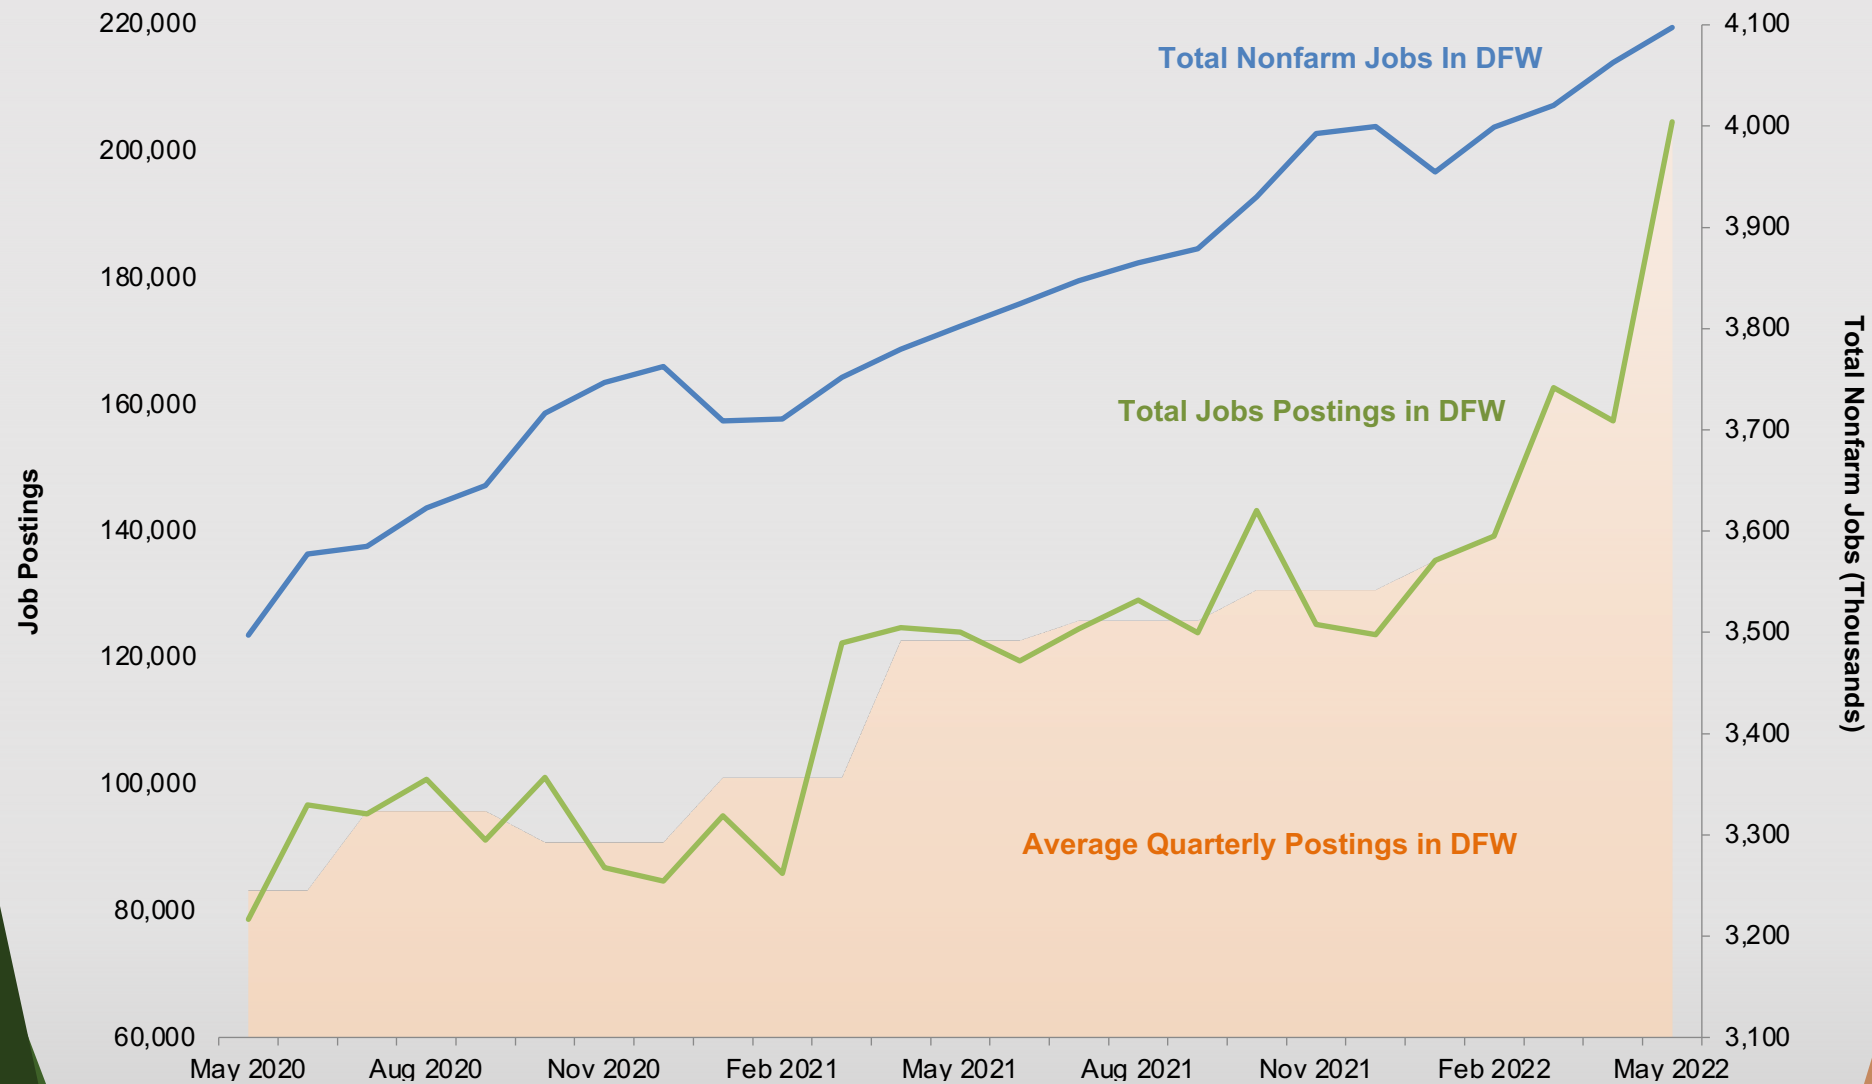

The fastest month-over-month growth in job postings went to an occupation that has been making headlines recently – **commercial pilots**. While the total number of postings might seem small compared to other groups, the key is in observing the relative growth from the previous month, which was a **990.9%** increase, showing a massive jump in demand for these workers.

As noted in the previous report, it was anticipated that May's **CPI** data for **DFW** would show a **slower rate of growth** following the trends observed at the state, regional, and national levels in April. This has been confirmed, as price growth in DFW remains positive but has slowed significantly from the data at the start of the year.

See the Federal Reserve Bank of Dallas' [Texas Employment Forecast](#) and [DFW Economic Indicators](#) for deeper analysis of these dynamics.
