

**DFW
LABOR MARKET
UPDATE
AUGUST 2022**

Published October 12, 2022

Summary

This August saw a series of shifts occur in the local labor market suggesting that the region might be entering into a period of **cooldown** following months of high inflation and increases to the interest rate. For the first time since the pandemic began in early 2020, job postings this year are lower than they were in the previous year, with a **-3,562** decrease from last August. This is coupled with an overall decrease of roughly **-1,800** fewer jobs from last month, which had already seen lower than average growth. Despite these metrics, all employment numbers are still above their levels from August 2021 for every major industry.

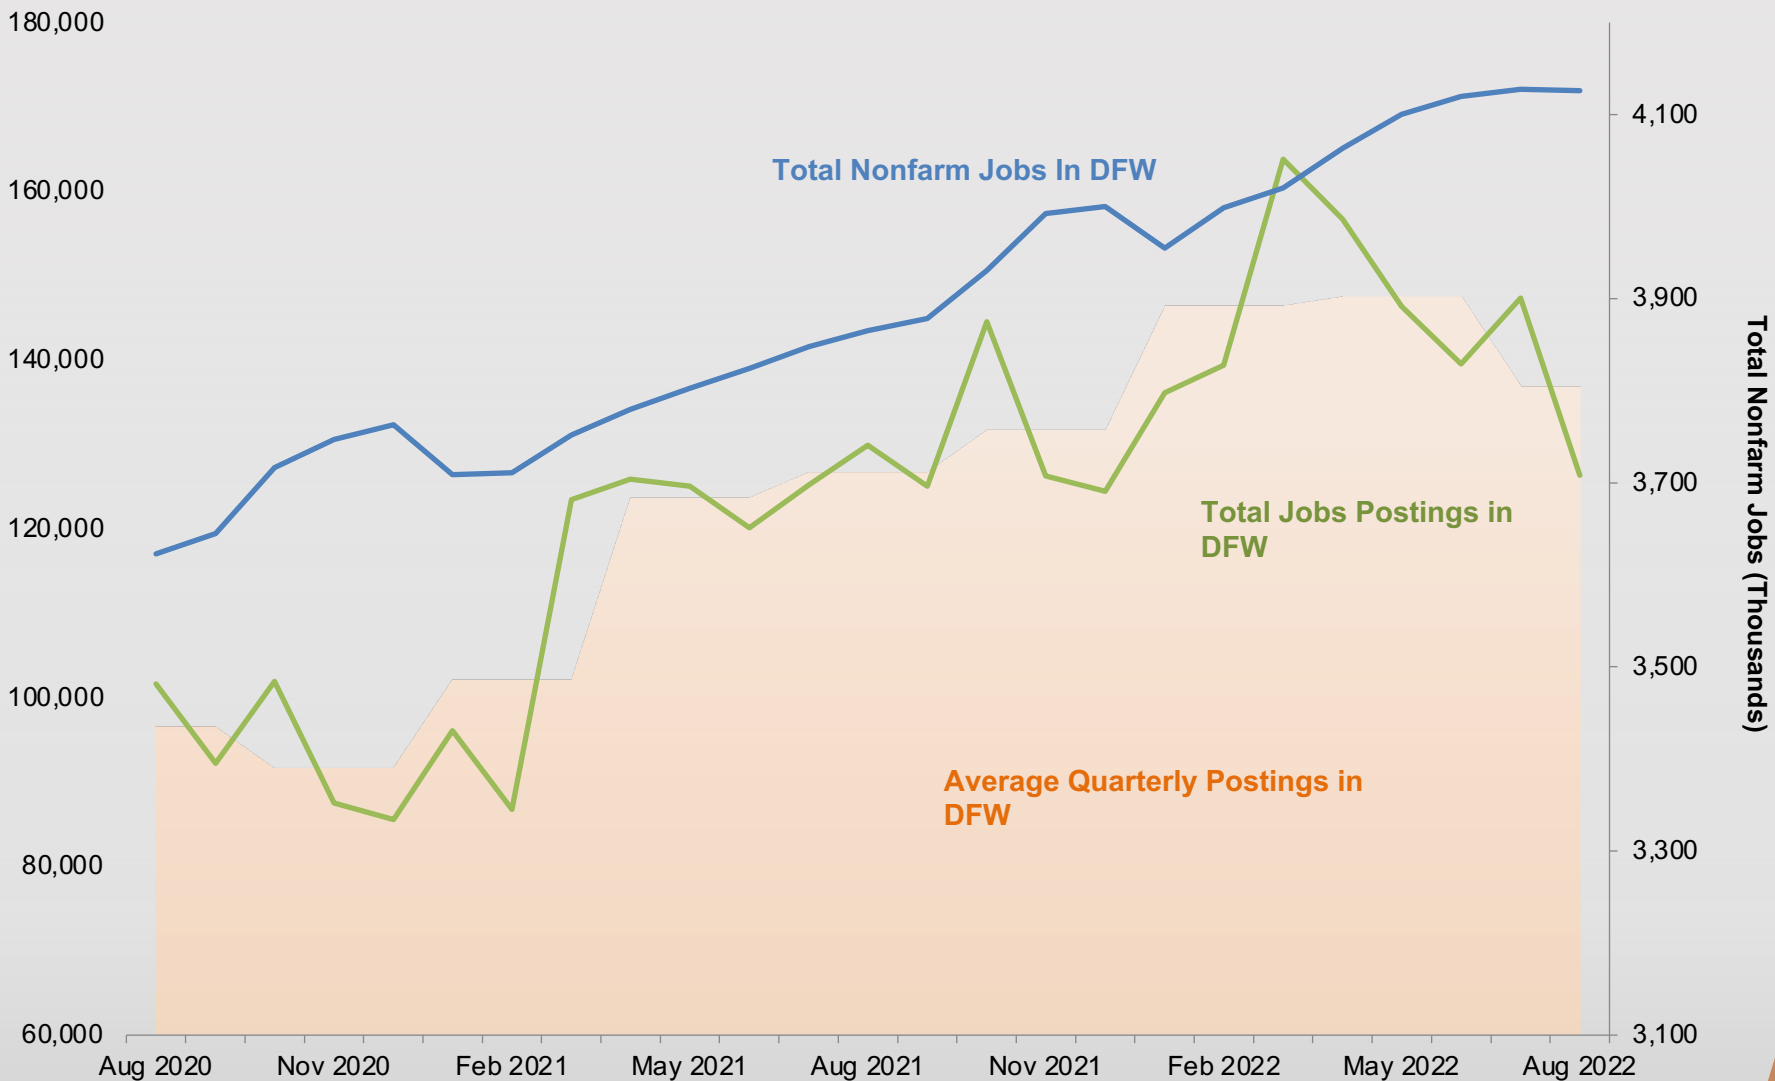

The food industry had some of the fastest growing job postings from last month, including Short Order Cooks and Food Preparation Workers which both had well over **double** the number of postings from July. For many of these positions, this is more a return to normal than shifting demand and is likely a result of seasonal trends. One notable change in the opposite direction is for heavy and tractor-trailer truck drivers, which experienced a **-46.6%** decrease in postings during the same period. This occupation is typically one of the most in-demand jobs for our region, so to see a decrease is a major shift from normal.

The reported consumer price index figures for the national, southern division, and state are all pointing towards stable prices from July, with **little to no change**. Next month's figures will show whether DFW sees a similar slowdown in price increases.

See the Federal Reserve Bank of Dallas' [Texas Employment Forecast](#) and [DFW Economic Indicators](#) for deeper analysis of these dynamics.

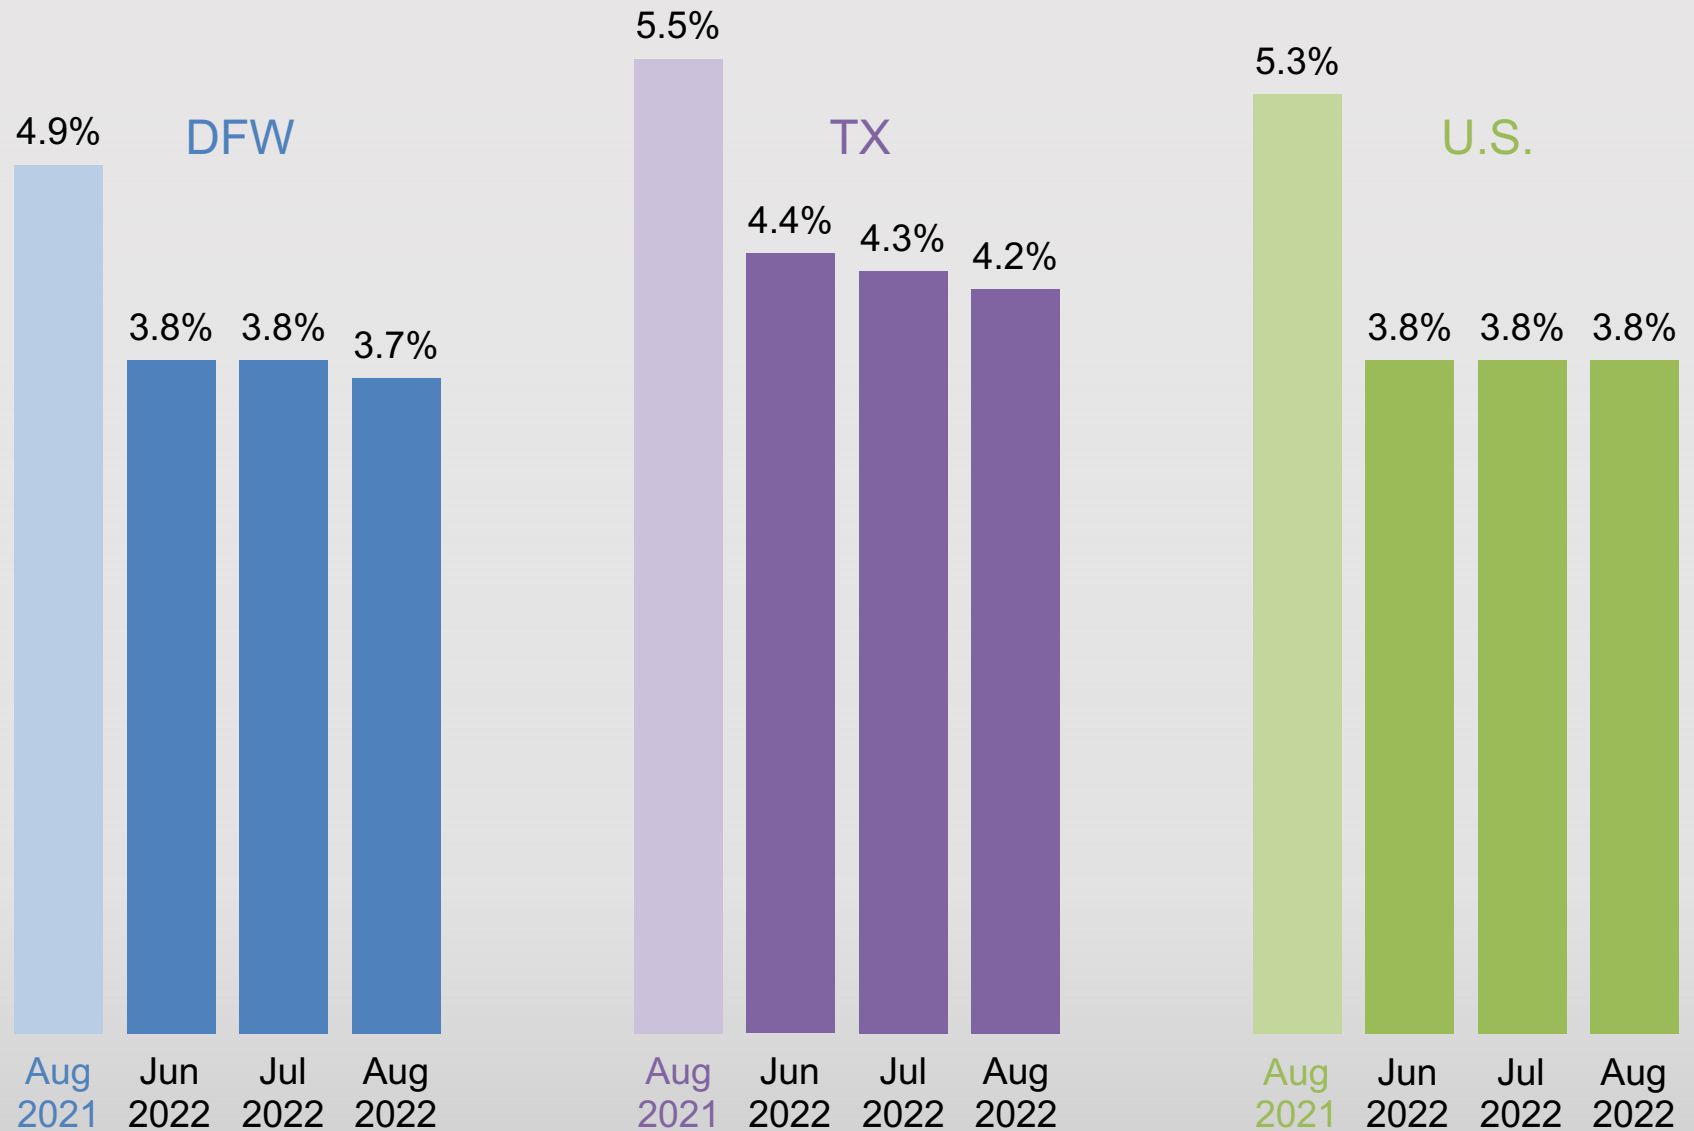

DFW – Job Postings vs. Nonfarm Jobs
